Introduction:

The rich tapestry that is Indian Culture is made up of so many stories and traditions that while
many of them echo in our collective cultural subconscious, many other struggle to find a foothold in our memories.

And that`s why we created Ithasa, cultural memories that curate these valuable pieces of who we are, to bring them alive again, to be experienced,
interacted with, understood and appreciated.

Our first such story is, perhaps, the most important of them all. Rāmkathā

A virtual museum that preserves the cultural memories of a civilization.
memories of the saga of lord rama, be those the most well-remembered stories, or lesser known lost tales.
And bringing to form the lessons of those sacred verses that are so much more than a story.

In vivid, exquisite three-dimensional art.
It is a journey that invites seekers to travel on three paths – or three dishas.
The three dishas feature a virtual installation each, depicting the great stories of the ramayana,
and celebrating lord rama in three different aspects, one for each disha.

Set up a scene with the provided 3d environment asset.

Light the scene to achieve the look of a cave interior with natural light source

Spawn the 3 coins appear using particles/fx effect on a button click
